

Sail into the future of Information Technology with Volt Consulting Services

Profiting from Our Programming Services & Applications Development

At Volt Consulting Services (VCS), our mission is to make our customers' businesses more competitive. We do this by plowing ahead of the progress wave in information technology. Often we cruise in uncharted waters, where lesser craft dare not sail.

We can stem a tidal wave of **IT** problems with tailored solutions for:

- Migrations
- Conversions
- High-tech outsourcing
- Client server development
- Paperless information management
- Multimedia publishing/electronic delivery
- Document management and publication prepress systems.

Why not jump on board VCS's ship, where the information horizon of the future looms closer, sharper and surer?

A Fortune 1000 Flagship

We're sailing as a high technology offshoot of a prestigious parent-Volt Information Sciences, Inc. It's our flagship. Listed on the New York Stock Exchange, with \$1 billion-plus annual revenues, Volt provides a staggering array of business and technical solutions.

You can see our Volt masthead flying proudly in more than 300 locations—around the world.

Tried and Tested Navigators

Your lifeline sits at the competitive edge. One side is calm and directed purpose;

the other, a vast and unpredictable sea.

Often that line between success and failure lies in computing technology and superbly designed information systems.

But, for this, you need to anchor your fortune only to those with credentials in programming and applications development

VCS Sailing Credentials:

- A 20-year reputation for providing workable IT solutions
- The backing and resources of a Fortune 1 000 parent company
- Strategic alliances with America's premier companies, such as IBM
- Instant access to thousands of top-flight programmers and analysts, a
- A satisfied client base spanning defense, utilities, government, automotive, and publishing giants.

When it comes to programming services and applications development, you won't find a more technically evolved ship than ours. The future looms right off our bow.

Doesn't this strike you as the sort of IT lifeline that all progressive companies need?
